

Websites Specifications

Website objectives and goals in relation to the business

The objective of the website is to create a global ecosystem called **Study With Me** where undergraduates can collaborate with one another regardless of their university or location. It allows students in the same field to study to foster a high focus collaborative environment and strive for academic excellence together. This program allows students all over the world to share knowledge and help each other grow academically to reach their dreams careers.

The goals are as follows;

Peer engagement across the world and transition from isolated learning to a global collaborative community:

This allows students from different universities, in the same fields (engineering and health sciences) to find one another. The goal is to ensure that regardless of where they are studying from, they engage in a collaborative environment from isolated learning to a shared “**Study With Me**” culture.

Target Market and Demography

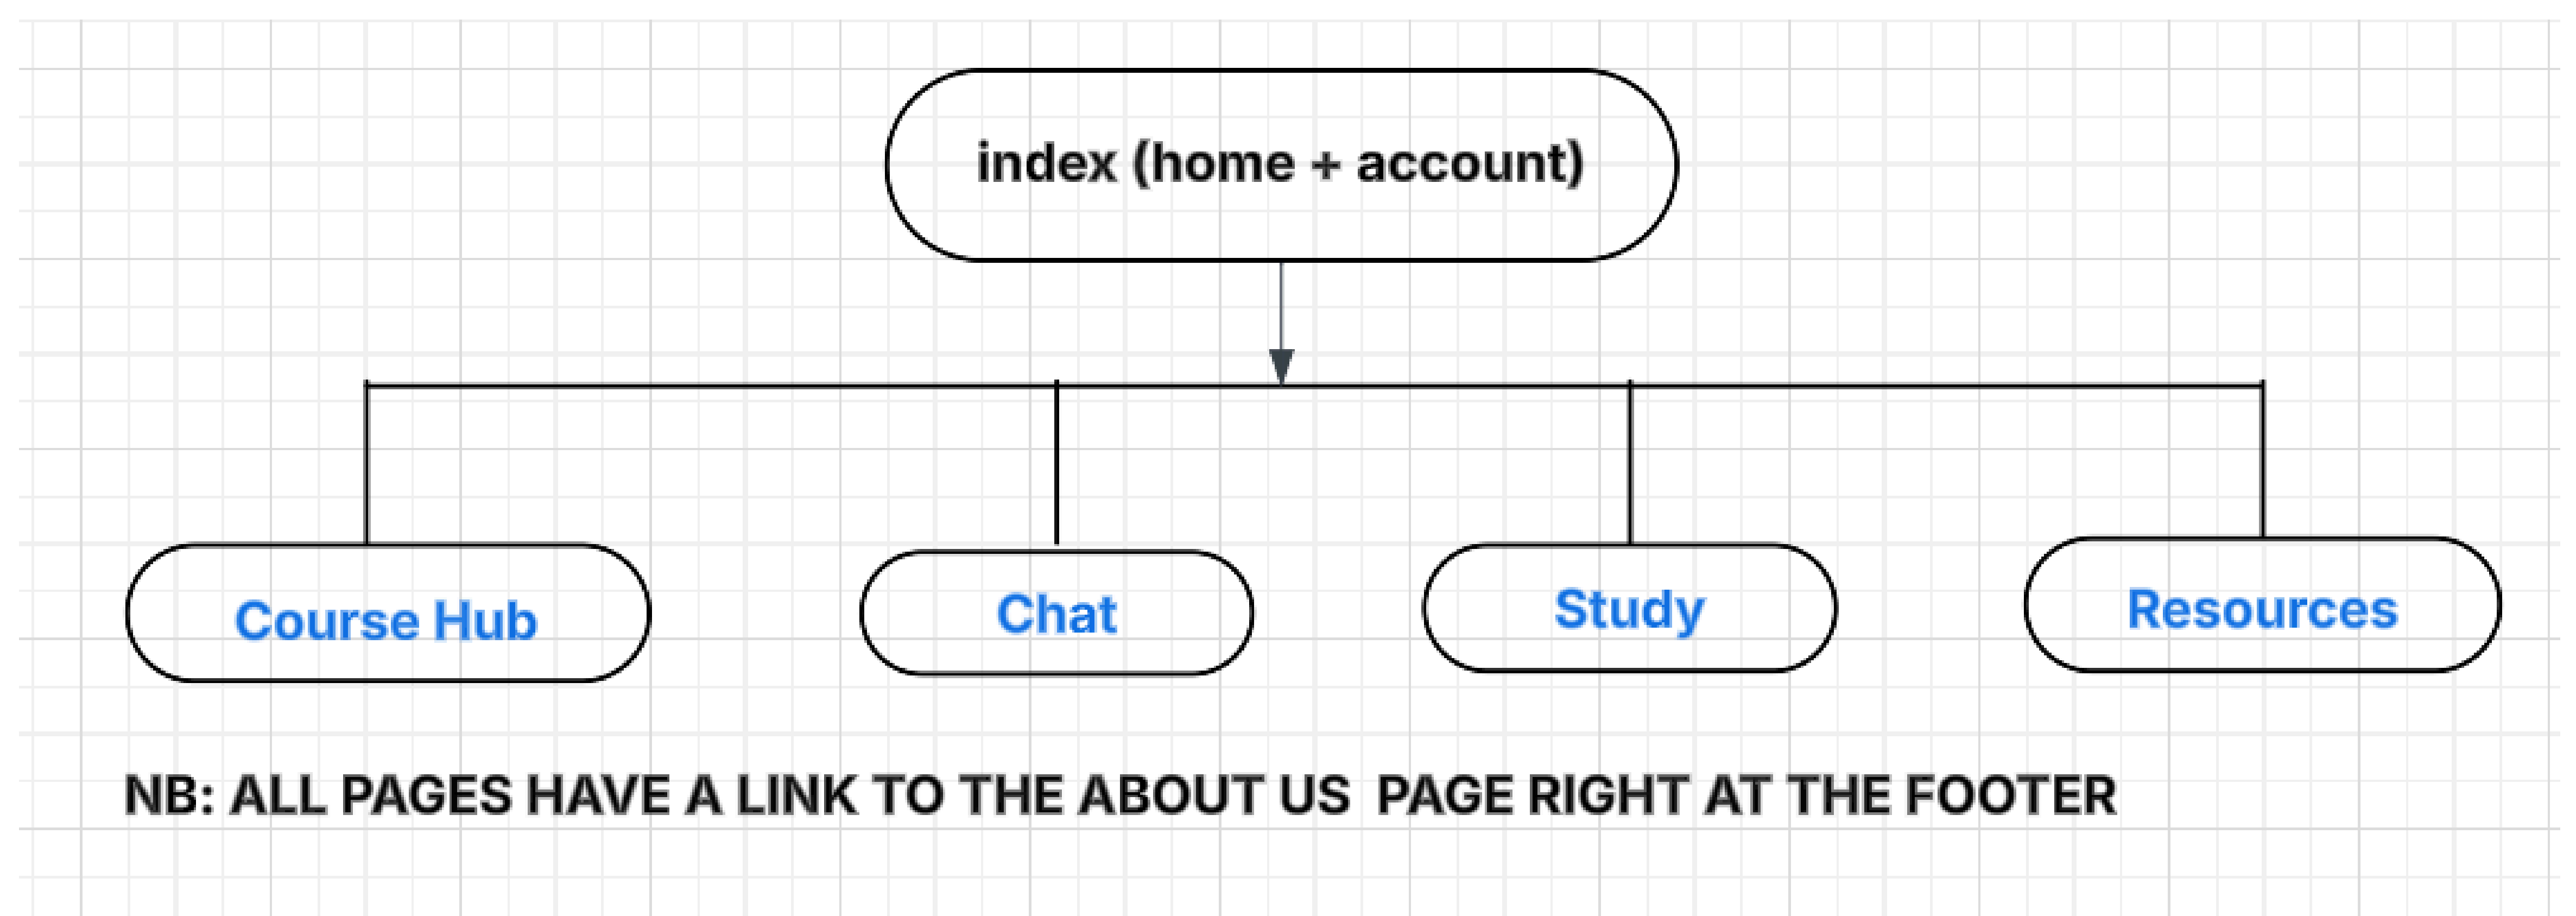

This website is specifically designed for tertiary students pursuing health science courses and engineering. For health sciences courses; medicine, nursing and occupational health and safety are the ones the website will be currently focusing on and as for engineering the courses that the website will be currently focusing on are computer systems, mechanical and electrical engineering. The website accommodates tertiary level students regardless of their age group.

INFORMATION DESIGN & TAXONOMY

The website is made in such a way that it allows undergraduates to connect based on their course of study. They can directly select from the homepage and access the global course hub where they can interact, study and share resources.

The home page has the account link and/ “get started” link where it allows students to create user account so that they keep track and monitor their progress

Site Map:

WORKFLOW

LOGICAL STEP BY STEP PATH;

The first page is the index page which is also known as the home page. From the home page has the link that takes the user through setting up an account for authentication to make a user profile where they will safely monitor their progress through their learning journey.

The navigation is accessible across all pages being the course hub, chat, study and resources pages that enables the user to click once to have access to whatever page that is in the website without broken paths.

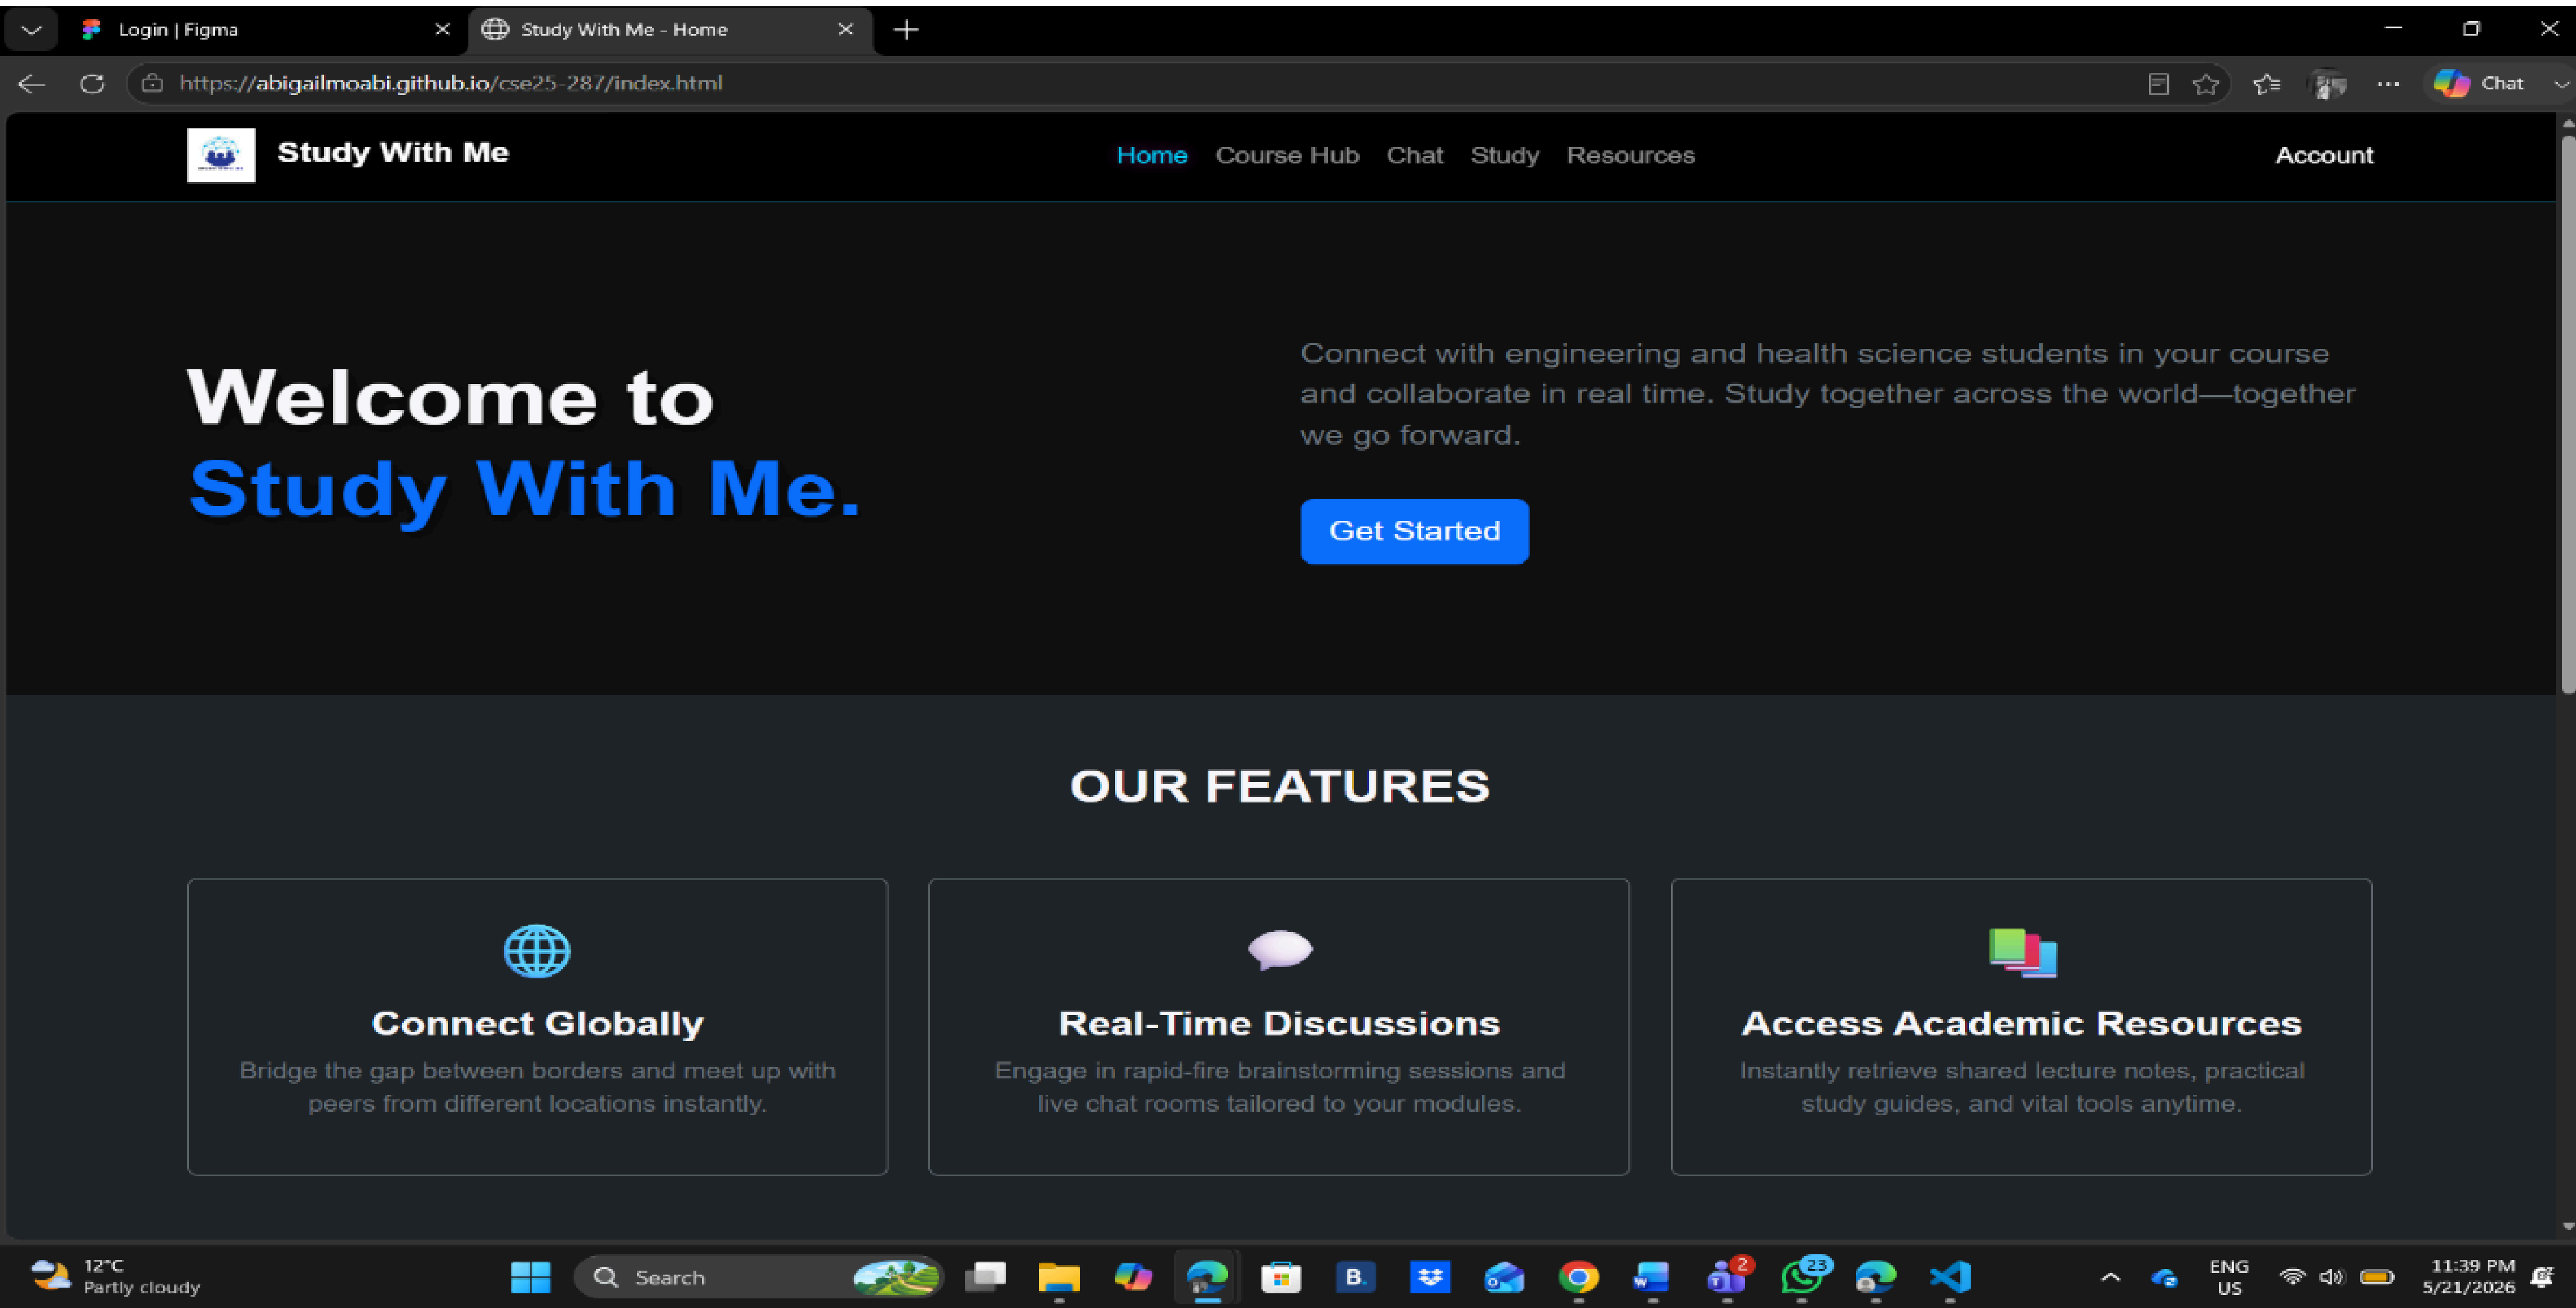

QUALITY TESTING

The website has been tested across different browsers and it is verified that it works. It was tested on devices with screen resolutions.

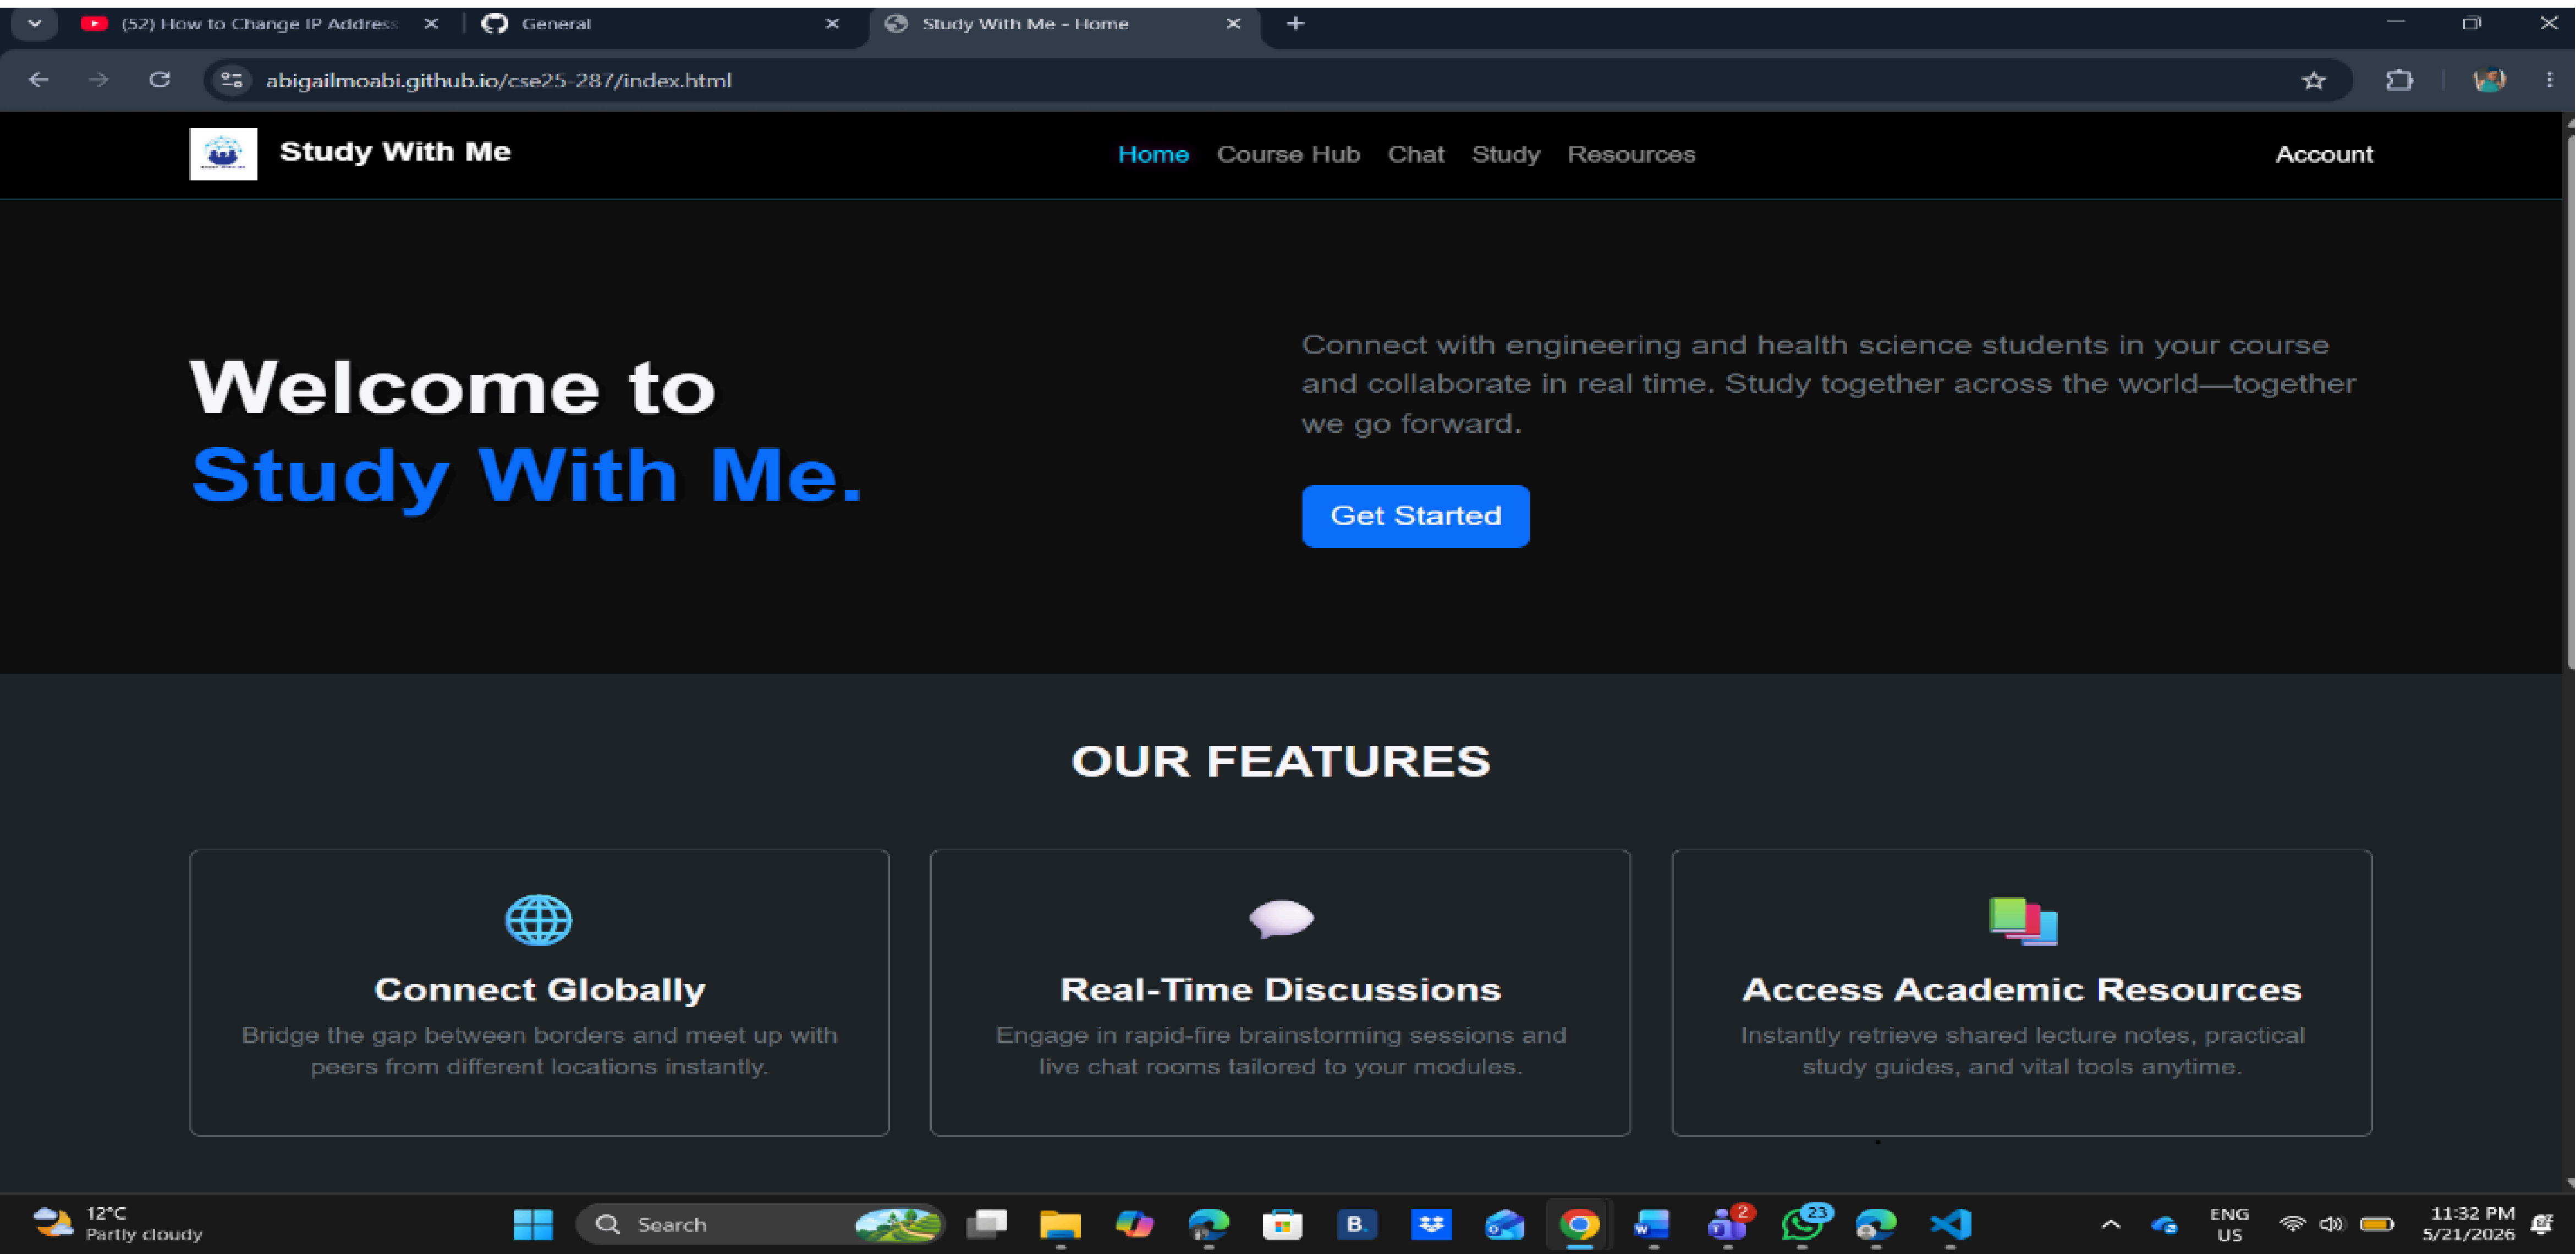

The website has been made using flexible layout so that the

PROBLEMS ENCOUNTERED

- When trying to duplicate the navigation bar so that all pages have the same template, the study.html and resources.html were not being responsive as they were supposed to. The aim was to make the active page to be highlighted at the menu so that the user can know which page they have currently opened.

So there was a visual glitch that occurred. The resources and study page were not highlighted when opened and the highlighting was stuck at the chat page.

The issue was resolved by auditing the code (HTML structure) of the 2 pages individually.

- Maintaining the layout consistently was difficult. While trying to prepare navigation bar and the footer, the elements randomly shifted. On some pages, the logo disappeared. The privacy policy text was invisible because of the dark theme

and the dark text which completely blended with the background.

The problems were resolved by the home page as a template to fix the alignment ensuring that the footer and the navigation bar are the same across all pages. I applied a white text (light text utility class) to the privacy and policy so that the text can be visible right against the dark background.

FUTURE DEVELOPMENTS

As a beginner, the website focuses on layout and design. It is not fully functional because it requires backend programming skills which as of now I don't have but would acquire.

Right now , any information the user types in, it vanishes without being stored. In the future, I will connect a database that will act as the permanent memory to accommodate data for the website and insure that the user information is secured and handles tasks like MySQL.

- Currently the chat screen is not responsive. Users can type the messages but cannot send or receive messages.

The future goal is to add a backend server that will allow users to chat, send and receive messages in real-time.

- The Account link allows users to enter their credentials but, the profile is not created.

The goal is to make sure that when the user log in, the account link automatically updates to a user profile page showing their data for authentication.

- Currently the website focuses on only 6 courses.

Upgrading the list of courses. The website will accommodate more engineering and health sciences courses to help more students.

LEGAL & PRIVACY

Your data privacy is important. Study With Me ensures all user information is kept secure and used only for academic collaboration

© 2026 Study With Me. All Rights Reserved

welcome to Study With Me

Connect with engineering and health science students in your course and collaborate in real time.Study together across the world-together we go forward.

Get Started

OUR FEATURES

Connect Globally

Bridge the gap between borders and meet up with peer from different locations instantly.

Real-Time Discussions

Engage in rapid -fire brainstorming sessions and live chat rooms tailored to your modules

Access Academic Resources

Instantly retrieves shared lecture notes, practical study guides and vital tools anytime

FUTURE GROWTH

Currently, Study With Me offers specialized courses in Computer Systems Engineering, Mechanical Engineering, Electrical Engineering, as well as Medicine, Nursing , and Occupational Health & Safety. Our goal is to soon plan to offer a wide range of Engineering and Health Science courses

Abigail Moabi

FOUNDER AND LEAD DEVELOPER

My name is ABIGAIL MOABI. My journey in higher education has been full of challenges and growth. Imagine being away from home to study, trying to balance your independence and overcoming self-doubt.

All these experiences shaped me. I realized that there are some students like me who thrive when they connect in their own way especially when they can share knowledge without the pressure of a crowd.

That is why I created Study With Me...
A global digital space where students across the world can come together, learn and grow united
