

Websites Specifications

★ Website objectives and goals in relation to the business

The objective of the website is to create a global ecosystem called Study With Me where undergraduates can collaborate with one another regardless of their university or location. It allows students in the same field to study to foster a high focus collaborative environment and strive for academic excellence together.

The goals are as follows;

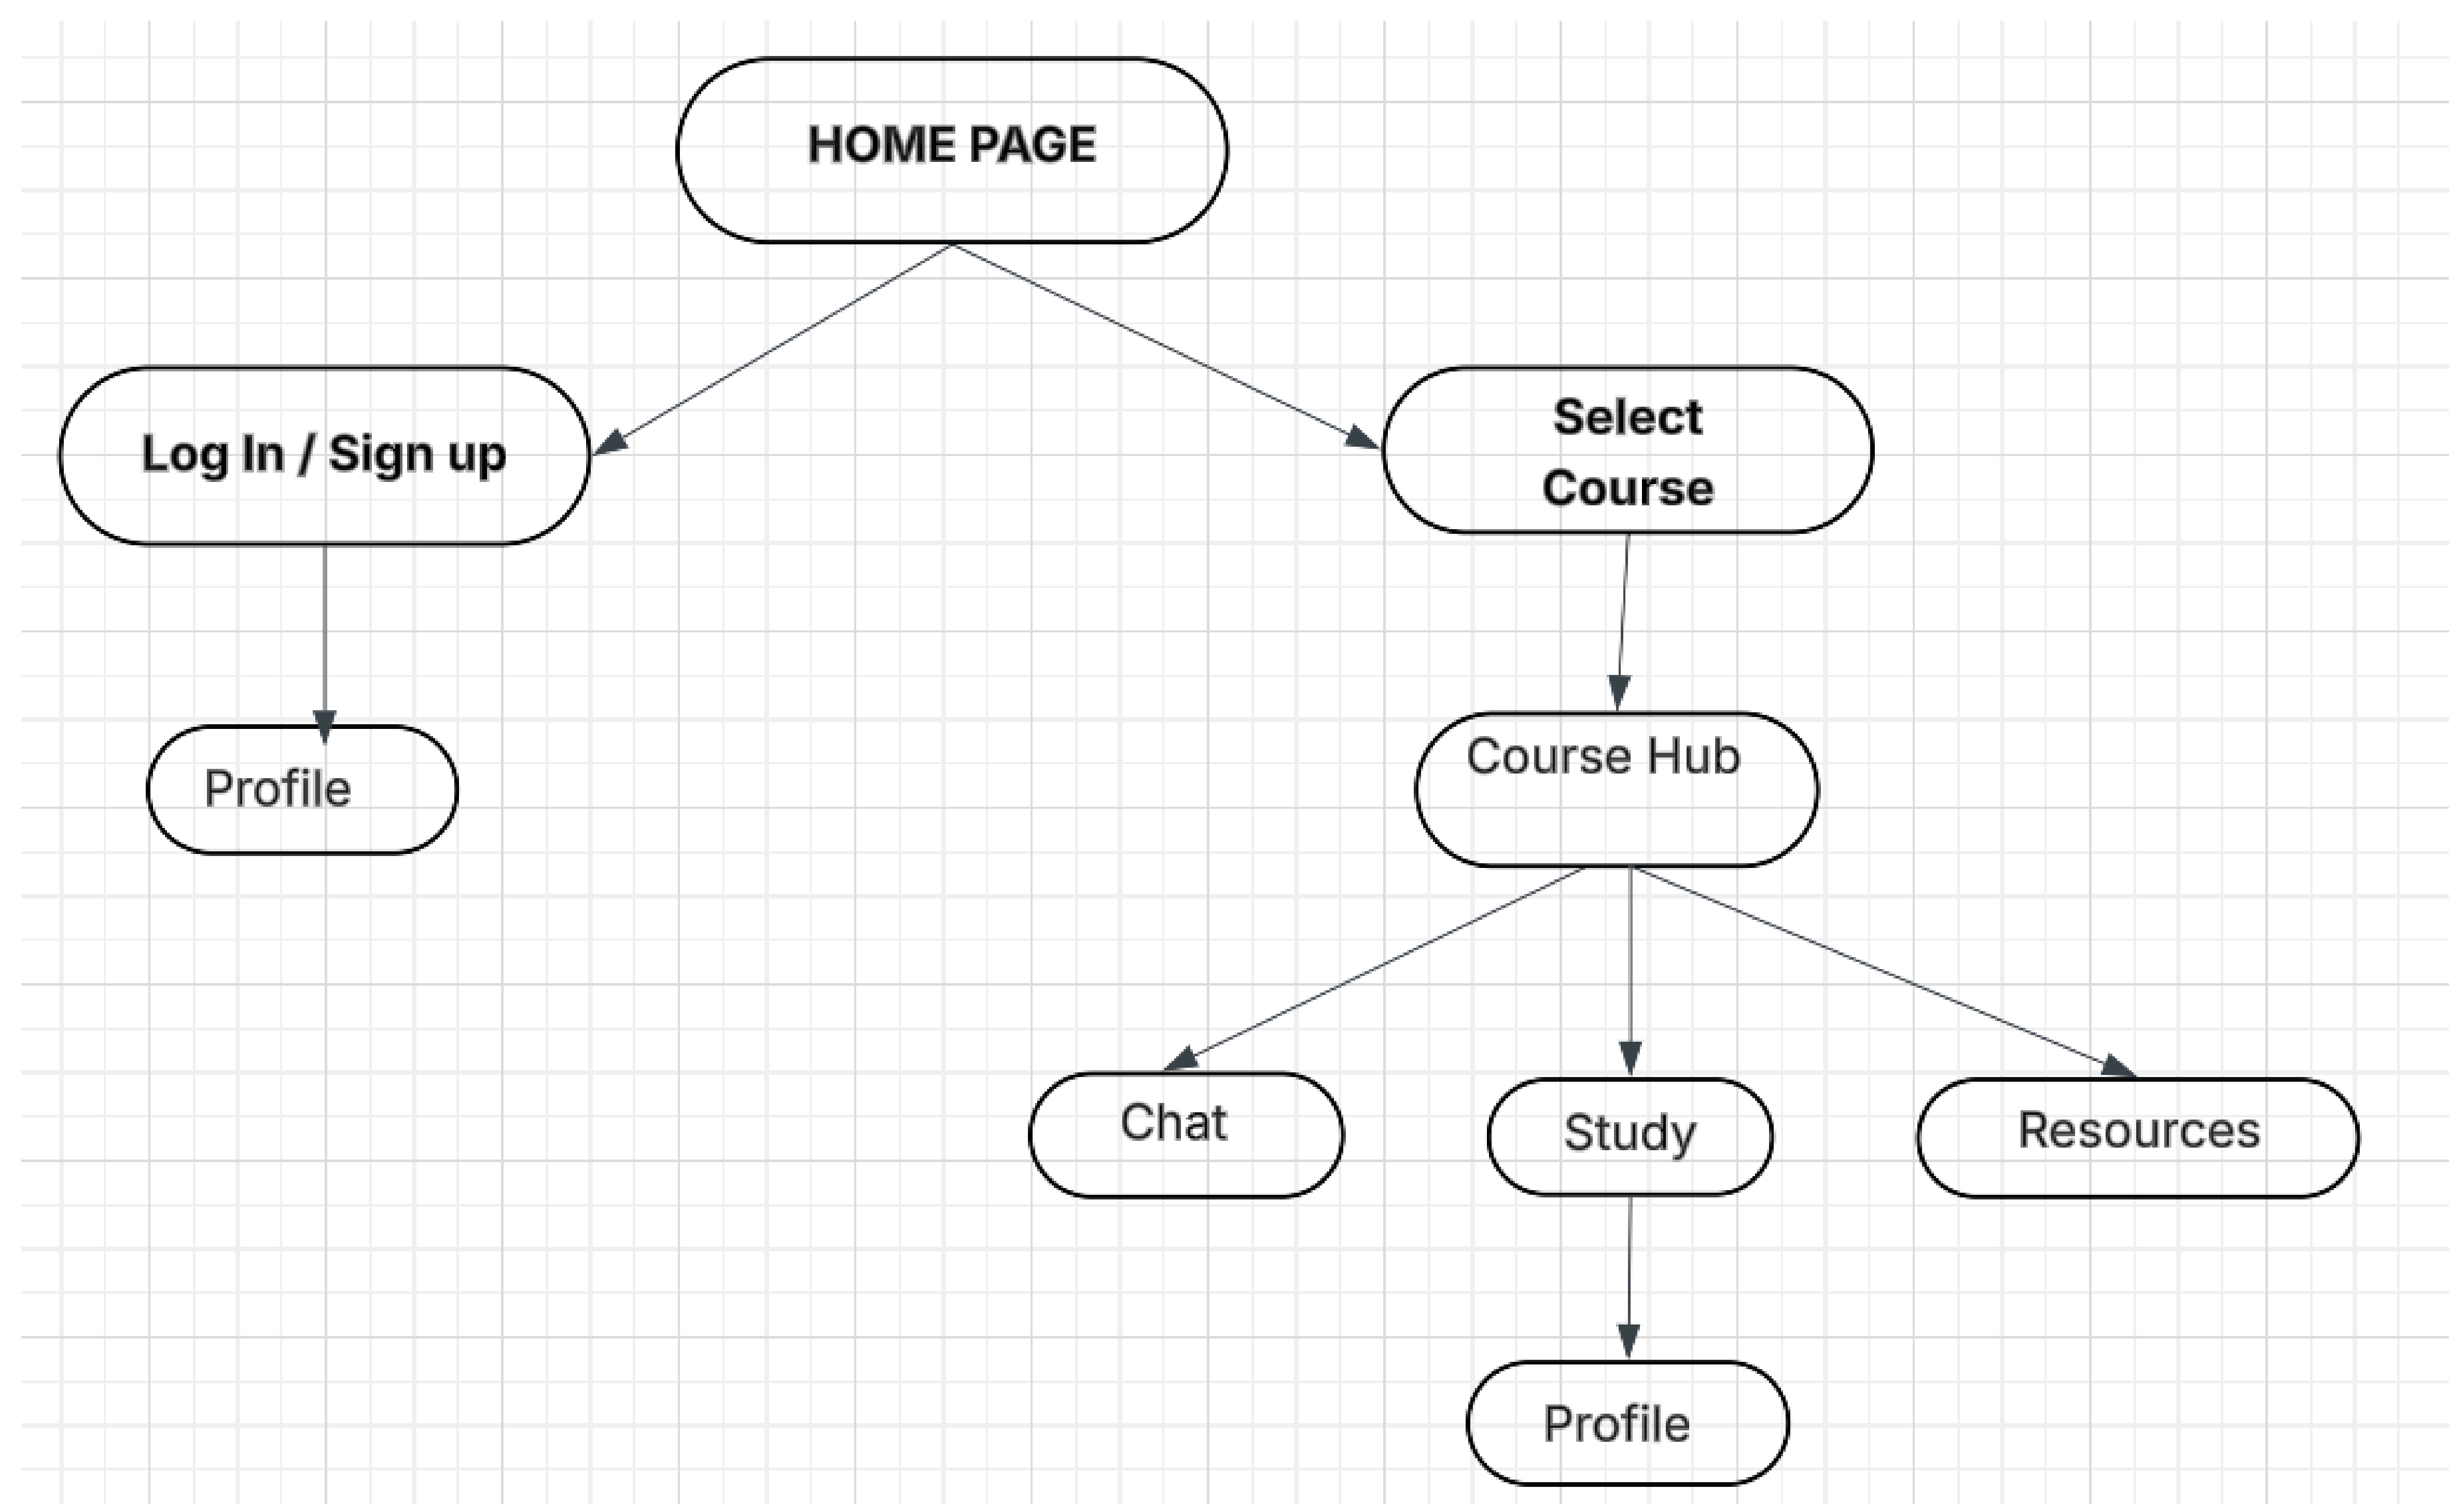

Peer engagement across the world and transition from isolated learning to a global collaborative community:

This allows students from different universities, in the same fields (engineering and health sciences) to find one another. The goal is to ensure that regardless of where they are studying from, they engage in a collaborative environment from isolated learning to a shared “Study With Me” culture.

★ INFORMATION DESIGN & TAXONOMY

The website is made in such a way that it allows undergraduates to connect based on their course of study. They can directly select from the homepage and access the global course hub where they can interact, study and share resources.

Site Map:

★ TECHNICAL BRIEF

The website will be developed using HTML and CSS to create and design the structure and layout of the platform. Visual Studio Code will be used for writing and editing whereas GitHub will be used to manage and store project files. These applications are good for the project because they are reliable and allow the creation of a functional and user-friendly platform that supports student collaboration and interaction.

LEGAL & PRIVACY

Your data privacy is important. Study With Me ensures all user information is kept secure and used only for academic collaboration

© 2026 Study With Me. All Rights Reserved

welcome to Study With Me

Connect with engineering and health science students in your course and collaborate in real time.Study together across the world-together we go forward.

Get Started

OUR FEATURES

Connect Globally

Bridge the gap between borders and meet up with peer from different locations instantly.

Real-Time Discussions

Engage in rapid -fire brainstorming sessions and live chat rooms tailored to your modules

Access Academic Resources

Instantly retrieves shared lecture notes, practical study guides and vital tools anytime

FUTURE GROWTH

Currently, Study With Me offers specialized courses in Computer Systems Engineering, Mechanical Engineering, Electrical Engineering, as well as Medicine, Nursing , and Occupational Health & Safety. Our goal is to soon plan to offer a wide range of Engineering and Health Science courses

COURSE HUB

Abigail Moabi

FOUNDER AND LEAD DEVELOPER

My name is ABIGAIL MOABI. My journey in higher education has been full of challenges and growth. Imagine being away from home to study, trying to balance your independence and overcoming self-doubt.

All these experiences shaped me. I realized that there are some students like me who thrive when they connect in their own way especially when they can share knowledge without the pressure of a crowd.

That is why I created Study With Me...

A global digital space where students across the world can come together, learn and grow united
